Because of the nature of Transparent speaker cable, all lengths sound the same. Different lengths can be combined to make a pair. Please consult with us about appropriate connectors and whether the cable as terminated will work with your equipment even if different than what you now have.

Transparent has made an incremental improvement in their MM technology for their analogue interconnect and speaker cables. That change allows us to give our customers a great deal on all of our demo, stock and used interconnect and speaker cable.

The sale prices range from 25% to in some cases more than 60% off the regular price. All are in

perfect operating condition. Some demo cables may have scuffs on the network cases. All are guaranteed by us for 5 years against manufacturer defects.

Music Link Plus and Music Wave Plus cables and above qualify for guaranteed upgrade pricing to higher level cables and MM2 technology. Reference cables and above can be updated to the new MM2 technology. Most cables are "MM" (Millennium) technology introduced by Transparent in 2005.

**Please See our Transparent Interconnect Sale List and our General Sale List for additional bargains. Both are accessible from the Sale List Page of our website.**
