THE RETURN OF WILSON

WILSON RETURNS TO THE SOUND ENVIRONMENT

Wilson and The Sound Environment are coming together once again. There are new and exciting things going on with Wilson and we have two great examples of them on demo right now. We are featuring the Sabrina and Alexia models with Alexia being premiered in our World Class System. You may have heard Wilson before, but not like this.

CONTINUED QUALITY, IMPROVED SOUND

The care taken with assembly and finishing a product has always been to the highest standard at Wilson. If anything, the fine quality that you see of the finished product is even higher now with continued facility improvements. The internal matching of crossovers to drivers make a pair of speakers that work as a pair. It is as it has always been, very exact, with each speaker recorded in the Wilson Archive in case a driver is ever damaged and needs to be replaced. In which case, an exact duplicate would be selected from Wilson's amazing stock of drivers which goes back through several discontinued models. Our own Gale Cooper has recently spent a couple of days out at Wilson and was blown away. He will have an exciting report coming soon about what he learned while he was there.

A WORD ABOUT DARYL WILSON

Often when a son or daughter takes over primary responsibilities for a family business, the outcome may not be the best. Fortunately Daryl Wilson has proven his mettle with his involvement in the last few new speaker designs. Daryl has had the primary responsibility for the all new Alexx. The new family of Wilson speakers are a stunning example of evolution. With the new silk dome tweeter, new cabinet materials, subtle curved cabinet design, the new speakers including the Sabrina and Alexia offer substantially improved performance and are great values.

ALEXIA

The recently introduced Alexia at \$52,000 and Sabrina at \$15,900 are extremely cost effective and great values. The Sabrina is surprisingly diminutive and can be easily accommodated in many small rooms. They can be placed remarkably close to the wall behind them and are easily driven with a modest integrated amplifier. They are so musically revealing that they also perform well with more advanced amplification such as the VTL 2.5i and the ST150 amplifier.

ENHANCING EXCELLENCE

Both of these models performance can be enhanced and extended by the use of Wilson or REL subwoofers. This gives an owner the option for future performance improvement as does step up in drive electronics and sources. The Sound Environment offers a Trade Up Program second to none, so this whole process of continuing improvement can come relatively easily.
